

MAHATMA GANDHI INSTITUTE OF MEDICAL SCIENCES, SEVAGRAM

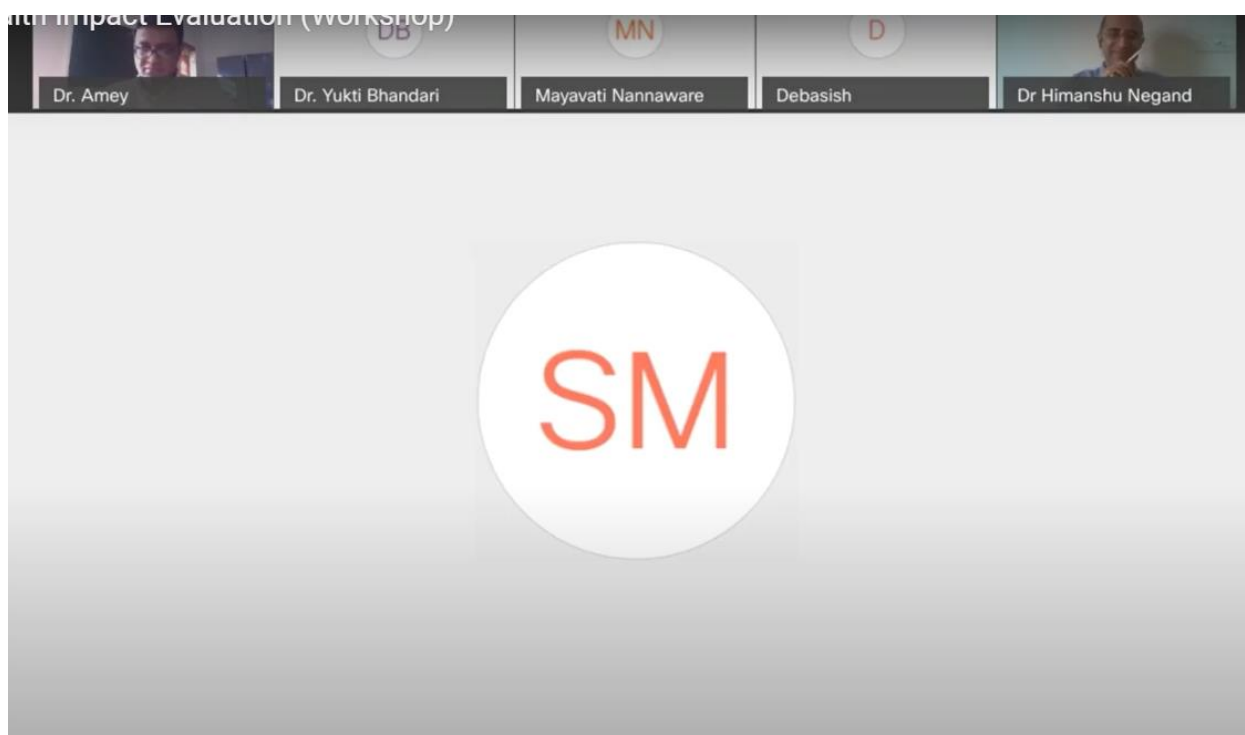

IAPSM National Youth Conclave March 2021

Report of Pre-conclave Workshop

Health Impact Evaluation

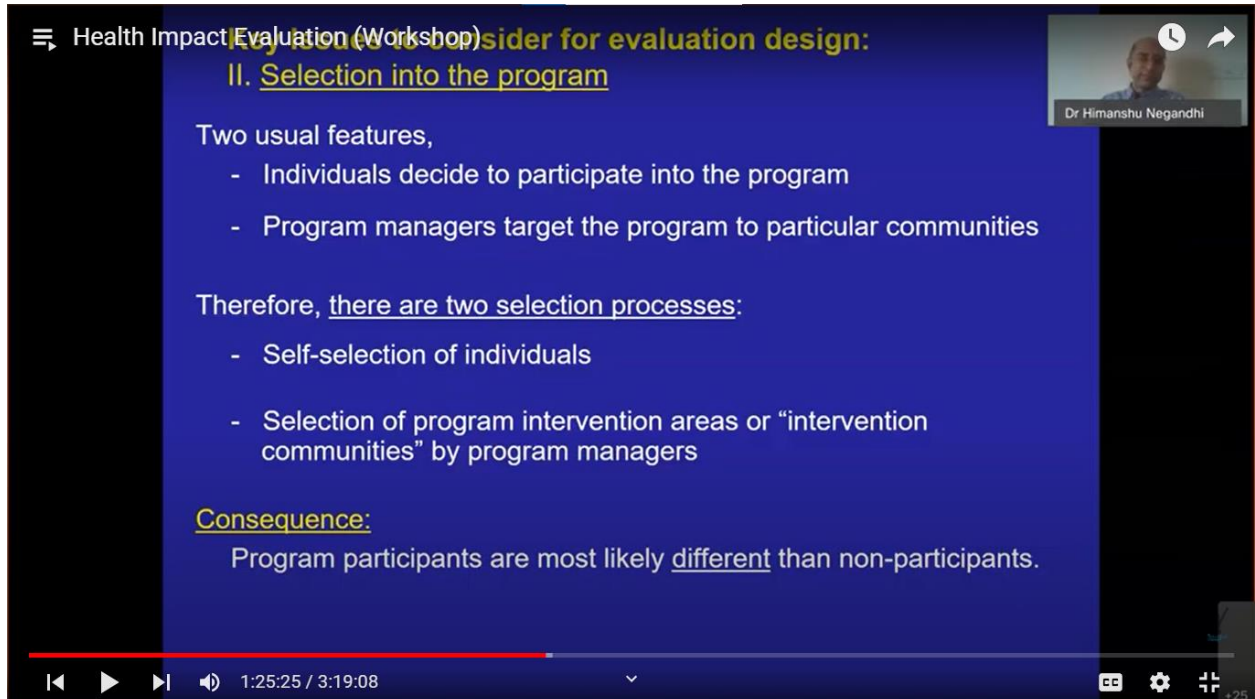

The resource person for this workshop was Dr Himanshu Negandhi, Additional Professor, Indian Institute of Public Health – Delhi, Public Health Foundation of India. The session started with the introduction of the key person and the importance of health impact evaluation.

The session was started with the philosophy for health impact evaluation and the need for the same. The discussion was upon the types of information and the types of evaluation needed for the respective information. The logical framework of a program was given to all for better understanding for the evaluation of the same.

The different methods that could be used for HIE was specified by the speakers. The process of each was discussed in detail. The reporting and advocacy of the HIE was represented in a framework pattern.

The case studies along with examples were discussed for further understanding of the process of health impact evaluation.

Health Impact Evaluation (Workshop)

Key points to consider for evaluation design: II. Selection into the program

Two usual features,

- Individuals decide to participate into the program
- Program managers target the program to particular communities

Therefore, there are two selection processes:

- Self-selection of individuals
- Selection of program intervention areas or “intervention communities” by program managers

Consequence:
Program participants are most likely different than non-participants.

Dr Himanshu Negandhi
